PROJECT CARGO & SPECIALIZED SHIPMENTS

Global logistics coordination for complex and oversized cargo

Some shipments require more than standard freight forwarding.

American Cargoservice coordinates complex, oversized, and high-value cargo through a global network of qualified logistics partners. From planning and documentation to execution, ACS helps ensure shipments move efficiently and arrive safely.

Global Network & Experience

American Cargoservice is a founding member of the [World Cargo Alliance \(WCA\)](#) network since 1998, now the world's largest network of independent freight forwarders.

ACS has also been a member of the WCA Projects network since 2007, providing access to a global group of specialized logistics partners experienced in project cargo and heavy-lift transportation.

This network allows ACS to coordinate complex international shipments with local expertise, flexibility, and reliable global coverage.

Project Cargo Logistics

Project cargo typically involves oversized, heavy, or high-value equipment that requires specialized logistics planning.

ACS works with trusted transportation partners and global agents to coordinate shipments that demand careful planning and precise execution across multiple transportation modes.

Types of Shipment

Project cargo shipments may include:

- Industrial machinery and manufacturing equipment
- Infrastructure and energy project components
- Large mechanical systems
- Specialized research and laboratory equipment

Oversized & Heavy Equipment

Large or heavy cargo requires specialized transportation equipment, routing, and coordination. ACS works with experienced carriers and logistics partners to plan and manage shipments involving oversized or complex cargo.

Planning considerations may include:

- Specialized loading equipment
- Oversized cargo routing
- Port and terminal handling coordination
- Transportation permits (as required)

Careful Planning for Complex Shipments

Project cargo shipments often involve tight timelines, detailed coordination, and specialized handling requirements.

ACS works closely with clients to evaluate shipment needs, anticipate potential challenges, and coordinate logistics solutions that ensure cargo arrives safely and efficiently.

Example Project Cargo Applications

ACS has supported a wide range of complex shipments, including:

- Large-scale industrial equipment transport
- Energy and infrastructure project components
- Time-sensitive international project shipments
- Specialized research and laboratory equipment

ACS provides end-to-end coordination for complex shipments, ensuring every stage is carefully managed from origin to final delivery.
